

	COUNTY OF SACRAMENTO EMERGENCY MEDICAL SERVICES AGENCY	Document #	8060.15
	<u>PROGRAM DOCUMENT:</u> Stroke	Draft Date:	11/20/96
		Effective:	05/01/17
		Revised:	08/09/16
		Review:	11/01/18

EMS Medical Director

EMS Administrator

Purpose:

To serve as treatment standard for Emergency Medical Technicians and Paramedics in treating patients showing signs or symptoms of a suspected stroke.

Authority:

- A. California Health and Safety Code, Division 2.5
- B. California Code of Regulations, Title 22, Division 9

Protocol:

- A. If possible, document a reliable time that the patient was last observed to be normal either from the patient or witness. A patient who woke up with symptoms is considered as having an UNKNOWN time of onset.
 - 1. Suspected Stroke: Suspected Stroke with one (1) new onset of lateralizing neurological signs; and/or two (2) unexplained new altered level of consciousness (Glasgow Coma Scale < 14) without response to Glucose, Glucagon or Naloxone (excluding head injury).

BLS TREATMENT

Supplemental O2 as necessary to maintain SpO2 ≥ 94%. Use the lowest concentration and flow rate of O2 as possible.
Airway adjuncts as needed.
Transport.

ALS TREATMENT

Advanced Airway adjuncts as needed.
Perform blood sugar determination (if the patient has an abnormal mental STAT).
Cardiac Monitoring.
Determine Cincinnati Prehospital Stroke Scale (CPSS). Normal response is 0, Abnormal is 1, Maximum Score is 3.

Initiate Intravenous (IV) access with saline lock.

If CPSS is > 0, AND onset of symptoms is six (6) hours or less, patient is to be taken to a certified stroke center.

Prehospital personnel will contact the receiving hospital and communicate "Stroke Alert".

Cincinnati Prehospital Stroke Scale (CPSS)			
Sign / Symptom	How tested	Normal 0	Abnormal + 1
Facial Droop	Have the patient show their teeth or smile	Both sides of the face move equally	One side of the face does not move as well as the other
Arm Drift	The patient closes their eyes and extends both arms straight out for 10 seconds	Both arms move the same, or both do not move at all	One arm either does not move, or one arm drifts downward compared to the other
Speech	The patient repeats "The sky is blue in Cincinnati"	The patient says correct words with no slurring of words	The patient slurs words, says the wrong words, or is unable to speak

If any of these tests are "abnormal," there is a 72% chance of a stroke.
